- Size 11= Extra-Large

## The most used Pilot gloves in the world

Lightweight Nomex® Aramid fiber knit gloves. Gauntlet style for extra forearm protection with fire resistant back panels and soft hair cell sheepskin leather finger and palm areas offer maximum dexterity and control. Also great for tactical operations. No Melt- No Drip protection. Gauntlet length gloves provide extra protection in combat and tactical operations where danger of injury from flash and flame could occur.

DuPont Nomex® brand aromatic polyamide (Aramid) fiber knitted panels are inherently fire resistant and will not melt or drip. Laundering does not affect fire resistant properties. Perspiration resistant sheepskin glove leather allows excellent dexterity and feel for tool, equipment, and weapon operation. Stays soft and supple even after being wet or laundered.

Used by Pilots, Special forces and servicemen all over the world.
